

ASM SIPLACE Feeder Storage Carts

E by SIPLACE and X Series

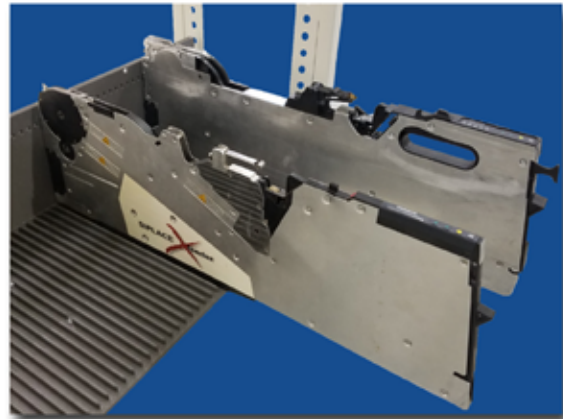

AGI 's model 206 cart frame is a flexible & modular design that efficiently stores your Siemens feeder bases. Built from rugged 1" square box tube welded steel construction for stability. Our Performa cushion-ride conductive, swivel casters, 5" diameter, with locks, make this cart easy to maneuver through the plant.

For E by SIPLACE and X Series machines, we machine the plates from 6061 Aluminum and Hard Anodize for long life. The plates are machined to mimic the machine interface.

The feeder shelves bolt to the cart frame on 2" centers, allowing you total flexibility to configure the cart to meet your changing needs. The cart also accommodates reel storage so you can manage the reels with the feeder base!
